# Voodoo Tokenomics

## Voodoo Tokenomics: Simple, Smart and Transparent

1. Total Supply: The total supply of Voodoo tokens will be fixed at 21,000,000 ensuring scarcity and value appreciation over time. This controlled supply creates a sense of exclusivity and rarity that can contribute to the token's long-term value.
2. Already 5% of the total supply of Voodoo has been burned and will remain permanently stored at the address [0x00369](https://etherscan.io/address/0x00369) This burning process effectively removes these tokens from circulation, creating scarcity and potentially increasing the value of the remaining tokens.
3. Marketing & Buyback: We allocate 5% of our crypto's supply for marketing, buyback, and growth. This benefits our community and investors, driving adoption and long-term success.
4. Liquidity Pool – Around 10%: We will distribute its liquidity across multiple pools, totaling approximately 10%. This strategic approach ensures easy trading, stability, and seamless transactions for our users. The diversified liquidity pools enhance the overall trading experience, providing ample liquidity for Voodoo tokens.
5. Holders Redistribution – 3%: We allocate 3% of our token supply to reward our community members through a holders redistribution mechanism. This initiative incentivizes long-term participation and fosters token ownership among our community, ensuring that our loyal holders are rewarded for their support.
6. Transparency and Auditability: Open communication with the community about any changes or updates to the tokenomics is maintained. This commitment to transparency builds trust and confidence among holders and potential investors.
